

AMENDMENT TO THE SPECIFICATION

Please replace the last paragraph on page 5 of Applicants' Specification (and continuing onto page 6) with the following amended paragraph.

An operating part 40 is assigned to the actuator 20 and has two levers 41, ~~[[42]]~~ 43 and is pivotably seated in a bearing 42 on a housing element 30 of the lock housing. The first lever 41 protrudes into the area of the actuator 20 and in an initial position is located a short distance away from the holder 22. The second lever ~~[[42]]~~ 43 protrudes in the area of a key receiver 31 of the housing element 30. The key element 33 has a stop which, in the initial position, rests against a counter-face of the housing element 30. The key element 33 is maintained in the initial position by the lever 43 that is supported on the stop 34 by a shoulder 44. In the initial position, the actuating element is held by a spring 36. The spring 36 is held, together with the operating part 40, in a receptacle 32 of the housing element 30. The spring 36 is supported on the lever 43.
